

## Svasara Jungle Lodge, Tadoba Communication and Recycling

Svasara Jungle Lodge encourages its guests to save water via clear briefing materials on reusing towels and linen in all guest rooms.

Phytoremediation wastewater treatment.

Water efficient taps and showerheads are in use with dual-flush toilets saving 60% per flush over single flush systems. En-suite facilities have only showers to reduce water consumption and although the lodge has a swimming pool, it recycles its water using an eco-friendly filtration system. Staff are briefed to conserve water and carry out routine preventative maintenance checks to identify and mend leaks. Rainwater harvesting provides water for secondary uses such as garden irrigation and the use of native plants requires less water.

The sewage treatment plant at Svasara uses phytoremediation technology, a system using the root systems of plants and other materials in several chambers to act as filters and clean the water. The treated water is used for irrigation.
