SUSTAINABLE TRAVEL
6 WAYS TO BUILD BACK BETTER

By Julian Matthews
Chairman of TOFTigers
Email: Julian.matthews@tofttigers.org

The writer is an experienced travel expert in Britain and has floated a new global partnership with hotels and tour operators: TOFTigers.

- Editors

It is not really such a long time ago that I first visited Ranthambhor Tiger Reserve in Rajasthan. In fact, it was 1998, just 23 years ago. I checked into one of only two small hotels, the Maharaja Man Singh's old hunting lodge on the bend of a tree-lined road, not far from a small sleepy town, and backing onto the reserve itself. I had heard there was a good chance of seeing a tiger here, the only place in the world where this was a really good possibility.

The place is unrecognizable today. A revolution has happened. Sawai Madhopur is a large bustling town that has spread across the landscape and for miles down that tree-lined road. This strip bordering the reserve is now dotted with expensive resorts, lodgings, and bed and breakfasts of every conceivable design and shape, from the ubiquitous concrete monstrosities to fake forts and mini palaces, complete with bulbous domes and minarets, designed to attract the new moneyed Indian fraternity on their holidays and weekends away.

Wow – so is this good for tigers I hear you ask? Yes and no would be my answer.

Yes, because having declared in 2003 that the Royal Bengal Tiger was about to go extinct with only 11 left in this area, India’s most famous park, now has over 70 wild cats. The park’s borders have expanded, many locals have benefitted hugely with thousands of jobs and new livelihood opportunities in this once remote marginal farming community. Great schools and hospitals have been built with visitor income. Furthermore, the park’s finances had never been better (before Covid!) from the 500,000 visitors each year, allowing better protection, community support, and compensation for livestock loss. Today the vast majority of visitors are domestic - a sea change from when I visited in 1998 – all wishing to see their own natural heritage - and this is the only sure-fire way to ensure nature conservation remains at the top of any politician’s agenda in this fast-developing nation.

No, because none of this was really planned. No thought was given to the key infrastructure needed for such wholesale change, no town or park long term planning, no carrying capacity thought through, no developmental plans which allocate land to use - and land not to use - that may be injurious to the park and its wildlife, no understanding as to aquifer drawn water needs and damage in this desert land, no thought on the incentives and disincentives for poor buildings, poor operations or waste and other pollutants beside a world-famous park. Without this, the real benefits of this new nature-based tourism sector have probably failed to materialize in the best, most judicious, and just way for both wildlife and communities – and certainly not sustainably.

Sadly, the Indian tourism sector is very unsustainable at the moment. This is not just me saying it – having predicted this 20 years ago when I first started TOFTigers - but both UNWTO and Euromonitor Research put India at or near the bottom of the sustainability global travel and tourism ranking. So, what needs to happen to change this. Here are my six key needs for a building-back better strategy.

Recognize that tourism can be beneficial: To destinations and communities, it can incentivize conservation and support protection and enrich all our lives, economically, socially, and culturally. Yet irresponsible and unsustainable actions can do the exact opposite, so better planning and understanding of it is needed by Forest Departments, key ministries, and the private sector.

Need to move away from Quantity to Quality: Manage tourism for the quality of the experience and its value to the host, the local communities, and nature. This requires active/intensive destination management. Today this may even need to contain or stop tourism’s land use.

With today’s social media great places and destinations highlight themselves – so federal and state tourism boards need to move away from simple promotion and far more into destination management, alongside park services, private sector, area authorities, civic society, and panchayats.

Redefine success:

This should no longer be on simple numbers of visitors, but favor customer satisfaction, community development, small business development, job creation, fair income distribution as measures of success. Set an early baseline and then monitor it. There is a

need to ensure investment in destinations. It will be a net positive for communities and environment with monetary incentives and tax advantages.

**Set Sustainable Standards:**

Set minimum standards of operations, using international standards like those of Global Sustainable Tourism Council (GSTC) and Sustainable Tourism Criteria for India (STCI), and then incentivize and encourage monitoring of these standards in destinations. Use taxes, awards, visitor benefits, or special passes to encourage and maintain best practices.

For the benefits of tourism to be materialized, it needs endless collaboration and partnerships between all stakeholders – but it also needs good and judicious policies, regulations, and laws that both incentivize the encourage best practice – but also discourage and dis-incentivize the worst practices.

**Governments should not be the sole arbitiators:**

It is critical to realize that everyone can conserve nature, it should not just be a mandate for governments.

We need to allow communities to collaborate with the private sector to protect, restore, reforest, and conserve lands bordering or connecting parks, around towns and cities, or in rural areas too.

We have all become accustomed to the idea that tourism is a basic human right. It is not – and if it were - more than just one in five of the world population would be doing it.

Travel and tourism are an undoubted privilege for a small part of society – and so it is all travelers' ultimate responsibility to demand that tourism is better, fairer, and more sustainable.

Travelers need to be prepared to pay for it. The pandemic may well have highlighted this to an extent that we could never have done without it.

**RESPONSIBLE TOURISM BENEFITS?**

- Editors

**The Cape Town Declaration, 2002 stated a definition:** “Responsible Tourism is tourism which:

*minimizes negative social, economic and environmental impacts

*generates greater economic benefits for local people and enhances the well-being of host communities

*improves working conditions and access to the industry involves local people in decisions that affect their lives and life chances

*makes positive contributions to the conservation of natural and cultural heritage embracing diversity provides more enjoyable experiences for tourists through more meaningful connections with local people, and a greater understanding of local cultural, social and environmental issues provides access for physically challenged people

*sensitive, encourages respect between tourists and hosts, and builds local pride and confidence, etc.”

**United Nations World Tourism Organization outlined another segment:** “Sustainable tourism development requires the informed participation of all relevant stakeholders, as well as strong political leadership to ensure wide participation and consensus building.

"Achieving sustainable tourism is a continuous process and it requires constant monitoring of impacts.

“The mission aspires to provide an additional income and a better livelihood to farmers, traditional artisans, and marginalised people along with creating a social and environmental equilibrium. Like to

Nepal has taken up homestay as part of Responsible Tourism and gains are loud and clear.

In India, the Southern state of Kerala happens to be the lone leading player and has demonstrated strong bent for such new idioms.

Its RT Mission says: The objective is to "make better places for people to visit and better places for people to live in.”

The RT Mission is the nodal agency formed by the Government of Kerala to spread and implement much called for ideologies and initiatives.

Pinarayi Vijayan, Chief Minister of Kerala, launched it on 20th October 2017. He was re-elected to same position in 2021 and re-emphasized it as a catalyst to healthier economic growth in that region swept by the Arabian Sea.

**Three-fold benefits:**

The Mission is envisaged with a 'triple-bottom-line' objectives which comprise

*economic

*social and

*environmental responsibilities.

The mission aspires to provide an additional income and a better livelihood to farmers, traditional artisans, and marginalised people along with creating a social and environmental equilibrium. Like to
